    de novo Y/22, prenatal diagnosis, 475
  XXXXY syndrome, banding studies: case report, 301
    and epiphysial dysplasia, 282
  Y, dicentric, inconsistent expression of both centromeres, child with ambiguous external genitalia: case report, 232
    Y, length heteromorphisms, classification, frequencies, and incidence in normal Caucasians, 277
  45,X, fertility, 132
  47,XXX, fertility, 132
Chromosome, Group B
  ring formation of 4 short arm with translocation of 4 and 9: case report, 310
  trisomy, complete 5p: correspondence, 319
    partial for short and long arm, 143
Chromosome, Group C
  pericentric inversions, inv(2)(p11q13) and inv (2) (p13q11) in 2 families, 388
  translocation of 4 and 9 with ring formation of 4 short arm: case report, 310
  trisomy, partial 6p, with karyotype 46,XY,der(22),t(6;22)(p22;q13)mat: case report, 479
    8 syndrome: case report, 70

Chromosome, Group D
deletion 14q and pericentric inversion 14: case report, 236
translocation, 45,XY,t(15;21)/46,XY,i(21q), dissociation as probable origin: case report, 305
15, triplication of short arm region: correspondence, 404
Chromosome, Group E
deletion and *de novo* simultaneous translocation (46,XX,-del(21)t(18;21)(q11;q11q21): case report, 152
trisomy 16p in liveborn infant, and review of partial and full trisomy 16, 375
18, in erythropoietic protoporphyria, heterozygous cystinuria and reduced peptidase activity, 46,XX/46,XX,18-mosaicism: case report, 157
trisomy 18 syndrome with an unusual karyotype, possible double isochromosome: case report, 73
partial, 18, with 47 chromosomes, resulting from familial maternal translocation: case report, 76
partial, 18p-,47,XX,+der(18),t(9;18)(p24q21)mat: case report, 391
partial, 18 with translocation, 148
Chromosome, Group G
translocation, 45,XY,t(15;21)/46,XY,i(21q), dissociation as probable origin: case report, 305
trisomy 21 with 47,+18 lymphocyte cell line: double mitotic nondisjunction: case report, 395
Chromosome data bank computerised: correspondence, 317
Cleft palate and accessory metacarpal of index finger syndrome, possible familial occurrence: case report, 162
Club feet, tall stature, scoliosis, brachydactyly, and distal symphalangism, new syndrome, 208
Coeliac disease, risk in children of patients, and effect of HLA genotype, 20
